Transgenic animals defective in one type of opioid receptor - used transgenic animals defective in one type of opioid receptor - used to identify agents for treatment of pain, drug addiction and transplant rejection, lacking side effects of known opiate(s) by transplant rejection, lacking side effects of known opiate(s) by isolosure; Fig 13; SBp; French.

Compission of the sequence is used to generate a transgenic receptor protein. The sequence is used to generate a transgenic computated with opiate receptors. In the mammal, the expression of associated with opiate receptor is modified, particularly by the gene encoding the opiate receptor is modified, particularly by the deletion of an exon and/or insertion of an arker gene, e.g. the nempton of saltered in nervous tissue. The agents are potentially of the gene is altered in nervous tissue. The agents are potentially of the gene is altered in nervous tissue. The agents are potentially consecuted or treatment of transplant rejection (as immunosuppressants). The method may isolate and identify powerful analgesics that lack morphine-like side effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                Mouse kappa opiate receptor gene.

Mammalian Kappa opioid receptor; mouse delta opioid receptor; analgesic; amplification; primer; rat; probe; E.coli; RT-PCR; hypnotic compound; ds.
                                                                                                                                                                                                                                                                                                                                                                            properties
Claim 2; Page 9-10; 15pp; Japanese.
The nucleotide sequence of the novel mammalian kappa opicid receptor
The nucleotide sequence of the novel mammalian kappa opicid receptor
DNA. The gene was isolated by amplifying a fragment from rat brain mRNA
by reverse transcriptase-PCR (RT-PCR) using primers Q8672-7 derived from
Plasmid pCRII to produce pRII. The plasmid pRII was used to probe a rat
Drain DNA library in lambda ZaPII to obtain a clone of the rat kappa
D.coli JM109 for production of the receptor protein. The receptor protein
Is useful for screening of analgesic and hypnotic compounds including
Sequence 2481 BP; 529 A; 588 C; 544 G; 770 m.

Ca partial nucleotide sequence of the novel human kappa opioid receptor

Ca partial nucleotide sequence of the novel human brain hippocampus CORA Library

Ca partial nucleotide sequence of the novel main hippocampus CORA Library

Ca sing a probe from the mouse kappa opioid receptor gene (Q75956). The

cusing a probe from the mouse kappa opioid receptor sequence of the

covery similar to the mouse kappa opioid receptor sequence. Of the

covery similar to the mouse vappa opioid receptor sequence.

C terminal 293 amino acids, 281 residues are identical and 6 residues

C terminal 293 amino acids, 281 residues are identical and conservative substitutions. The gene encoding the human opioid

c receptor can be placed in a suitable expression vector for production of

the protein in a cell. The opioid receptors thus produced are useful for

the protein in a cell. The opioid receptors proteins, for use in

capable of interacting with the opioid receptor proteins, for use in

capable of interacting with the opioid receptor proteins, for use in

capable of sequence 1000 BP; 238 A; 255 G; 278 T;

This CDNA sequence comprises the coding region for human kappa opioid receptor (KOR, see W30297), a G protein-coupled receptor implicated in neurotransmission. A novel method for selectively activating a target cell (TV) comprises: (i) introducing into the activating a target cell (TV) comprises: (i) introducing into the activating a target cell (TV) comprises: (i) introducing into the activating a mucleic acid sequence (I) that expresses a G protein-coupled receptor (A) modified to be activated superiorly by a synthetic receptor (II) exposing the transfected (A), inducing the receptor activation (A) has: (a) decreased binding affinity for a selected natural ligand of the native receptor; (b) binding affinity for activation. (A) has: (a) decreased binding affinity for a sclivated by binding (B) sufficiently to produce the required cellular response. Also new are: (1) transgenic cells including heterologous (I) in the genome; (2) cellular implants comprising a TC transfected with (I); (3) isolated (I); and (4) transgenic non-human animals expressing (A). Activation of (A)

This sequence codes for the human kappa opioid receptor and was obtained from two overlapping oDNs fragments isolated from a human placental cDNs library. The fragments were amplified from the library using PCR primers based on the sequence of human percent clones which hybridissed with a murine delta receptor cDNs probe. Nucleotide probes derived from the kappa opioid receptor cONs coding sequence are useful for diagnosis of neurological, cardio-vaccutar and psychiatric disorders associated with opioid
                                                                                                                                                                                                           New nucleic acid encoding the human Kappa opioid receptor - usef

Selective activation of target cell expressing modified G protein coupled receptor - allows control of cellular proliferation, especially for amplification of transfected cells in gene therapy. Example 1; page 77-79; 117pp; English.

This cDNA sequence encodes a polypeptide (see W30298) comprising the num of protein-coupled kappa optioid receptor (KOR) (see also W30299); lens a receptor Activated superiorly by a synthetic are receptor activated superiorly by a synthetic ligand. A novel method for selectively activating a target cell (TC) comprises: (i) introducing into the cell a nucleic acid sequence (I) that expresses a RASEL (A) and (ii) exposing the cransfected cell to small synthetic molecules (B) that bind to and activate (A), inducing the G protein coupled cellular response associated with receptor activation. (A) has: (a) decreased binding affinity for a selected natural ligand of the native receptor; (b) binding affinity to produce the required cellular response. Also new
results, in vitro or in vivo, in cellular proliferation, or secretion of a cellular product, particularly a heterologous therapeutic protein encoded by a second inserted nucleic acid sequence. Particularly it is used to expand the relatively few cells that are successfully transfected during gene tharapy procedures. Other responses that can be regulated are cell migration and contraction, or pigment production. In transgenic animals, expression or stimulation of (A) is designed to develop cardiac arrhythmia, symptoms of bone disease, seizures, vascular contractions, dementia, neurodegeneration etc., for use as models of these diseases (claimed). The transgenic animals are also used for production of improved food products (e.g. increased calcium content in eggshells or altered fat/lean ratios) or to control fertility or induce labour. A RASSL derived from KOR, designated C CDNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-APR-1998 (first entry)
Human kappa opioid receptor modified cDNA.
Selective target cell activation, G protein-coupled receptor;
RASSL; gene therapy. cell proliferation, kappa opioid receptor;
human; transgenic animal; arrhythmia; bone disease; seizure;
vascular contraction; disease model; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0

                                                                                                                                                                                                                                                                                                                                           0;
are: transgenic cells including heterologous (I) in the genome; cellular implants comprising a TC transfected with (I); isolated (I); and transgenic animals expressing (A). Activation of (A) results, in vitro or in vivo, in cellular proliferation, or secretion of a cellular product, particularly a heterologous therapeutic protein encoded by a second inserted nucleic acid sequence. Particularly it is used to expand the relatively few cells that are successfully transfected during gene therapy procedures. Other responses that can be regulated are cell migration and contraction, or pigment production. In transgenic animals, expression or signal and designed to develop cardiac arrhythmia, symptoms of bone disease, seizures, vascular contractions, dementia, neurodegeneration etc., for use as models of these diseases (claimed). The transgenic animals are also used for production of improved food products (e.g. increased calcium fertility or altered fat/lean ratios) or to control
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example: Fig 8b; 74p; Facilish.
To isolate opiate receptor genomic clones, 300,000 human genomic clones and a similar number of mouse genomic clones were probed with the 1.1 kb mouse delta opioid receptor clone DoR-1 Pst/Xbal fragment. One mouse clone and three human genomic clones were isolated. The 3 human clones had very different EcosI patterns which indicated that three different genes were represented by the human genomic clones which were designated H3, H14 and H20. H14 maps to chromosome 8. It encodes the human kappa opicid receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                           Gaps

Treating and detecting tumours e.g. pancreatic somatostatinoma treating and detecting tumours e.g. pancreatic somatostatinoma claim 18; Fig 10; 50pp; English.

A partial clone of purified pituitary somatostatin was used to design primers ICII and TM VII. Rat genomic DNA was subjected to PCR and rom the deduced location of the corresp. peptides i.e. TM VII and ICII, a 50l bp fragment of the receptor CDNA was obtd. This sequence was used in PCR to obtain the 5' rat brain SR sequence (some bases undefined and having a gap in the sequence). The receptor may be undefined and having a gap in the sequence). The receptor may be required to raise antibodies for detection and treatment of tumours in patients, and to treat e.g. pancreatic somatostatinoma, and to regulate the action of somatostatin in vivo.

Disclosure, Fig.1, 35pp. English.

Primers based on rodent opoid receptors were used to amplify rat genomic DNA. Products were re-amplified and subcloned into pCR-II vector and amplified in E. coli. Plasmid DNAs were isolated, and an unspliced sequence was obtd. (Q92972) encoding the transmembrane
                                                                                                                                                                                                             Pan Y. Pasternak GW; WPI; 95-193814/25. Pressibly R74298. Pressibly R74298. Nucleic acid molecule(s) encoding a kappa-3 opicid receptor, and antibody against the receptor.
                                                                                                                                                                                                                                                                                                                                                              image cell membrane-bound receptor in a subject
Disclosure; Fig.1; 68pp; English.
Degenerate primers based on conserved sequences of the mouse delt
opioid receptor were used in PCR to amplify mouse kappa-3 opioid
receptor con in a mouse brain lambda ZAP con in 12, 536 A; 680 C; 663 G; 721 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated DNA encoding an opiorph receptor - used to develop prods. for identifying opioid agonists and antagonists and for detection and manipulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              T89585 standard; cDNA; 1452 BP.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The nucleotide sequence of the novel mouse opicid receptor-like receptor gene MOP2. MOP2 is a mouse receptor with pharmacological propeties which are dissimilar to the propeties of classic opicid receptors such kappa, delta, mu or sigma. It has been found that drug of high abuse potential or analgesic potency bind selectively to this receptor. This suggests that this receptor could be important in the development of drugs to novel mouse kappa and delta opicid receptors isolated and produced such as the novel mouse kappa and delta opicid receptors (475926-7) are useful for the development of novel assays designed to select or improve substances, capable of interacting with the opicid receptor proteins, for use in sequence 1330 BP; 250 A; 368 C; 350 G; 352 T;

New nucleic acid encoding new human mu opioid receptor - and practice acid encoding new human secretarial and related vectors, treatment and drug screening.

PT sample 9: Page 218-222; 266pp; English.

CC The CDNA given in 099233 was isolated from a rat brain library by low stringency hybridization with rat un opioid receptor CDNA (Q89222). The clone encoded a 367-amino acid protein (R71968) that showed high homology with mu, kappa and delta opioid receptors but lacked affinity for their ligands, suggesting it to be connence 1567 BP; 313 A; 440 C; 402 G; 412 T;

Patent No. 5538882
GENERAL INFORMATION:
APPLICANT: Matsul, Ikuo
APPLICANT: Honda, Kazuhiko
APPLICANT: Honda, Koichi
TITLE OF INVENTION: Variant-Type Carbohydrate Hydrolase,
TITLE OF INVENTION: Variant Gene Of The Enzyme And Method For Producing
TITLE OF INVENTION: Variant Gene Of The Enzyme And Method For Producing
TITLE OF INVENTION: Oligosaccharide Using The Enzyme
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Blich, Stewart, Kolasch & Birch, LLP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;

```
The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the CDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized cerebellum library cDNA Library Preparation: M.B. Scares Lab Clone distribution: NIR BMAP CDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó

polylinker; SIte_1: Not I; Site_2: Sco Ri; The
NH_BMAP_M_S1 library is a subtracted library derived
forlyed from a mixture of normalized libraries from ten
NH_BMAP_M_S1, which in turn is a subtracted library
derived from a mixture of normalized libraries from ten
regions of the mouse brain (cerebellum, brain stems,
olfactory bulbs, hypothalamus, cortex, amygdala, basal
ganglia, pineal gland, striatum, hipoccampus). The driver
used for subtraction consisted of a pool of 5,000 clones
from the NIH_BMAP_M_S1 library and a pool of 5,000 clones
obtained from non-normalized and normalized mouse brain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Entaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia; Entaryota; Metazoa; Chordata; Craniata; Vertebrata; Mammalia; Entarota; Primates; Catarrhin; Hominidae; Homo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transgenic animals defective in one type of opioid receptor - used transgenic animals defective in one type of opioid receptor - used transplant rejection, lacking side effects of known opiate(s) bisclosure; Fig 13: 58pp; French.

This sequence represents the mouse kappa opiate receptor. The gene sequence is used to generate a transgenic non-human mammal for identifying agents for treating disorders associated with opiate receptors. In the mammal, the expression of the gene encoding the opiate receptor is modified, particularly by the deletion of an exon and/or insertion of a marker gene, e.g. the neomycin resistance gene, into the sequence. Especially the expression of the gene is altered in nervous tissue. The agents are potentially useful for treating severe pain (chronic or acute), drug addiction and/or prevention or treatment of transplant rejection (as immunosuppressents). The method may isolate and identify powerful analgesics that lack morphine-like
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mouse; kappa opiate receptor; transgenic animal; mammal; identification; exon; nervous tissue; pain; drug addiction; transplant rejection; immunosuppressant; analgesic; morphine; side effect.

New DNA encoding human mu opiate receptor - used esp. for screening ords. for activity as opiate agonists or antagonists or activity as opiate agonists or antagonists or activity as opiate agonists.

NMOR CDNA was obtd. from a human cerebral cortical cDNA library screened with fragments of a rat mu opiate receptor. The encoded protein showed homology to rat mu, delta and kappa opiate receptors (R76781-83).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The amino acid sequence of the novel mammalian kappa opioid receptor.

The gene was isolated by amplifying a fragment from rat brain mRNA by reverse transcriptase-PCR (RTOFN using primers 086726-7 derived from the mouse delta-opioid receptor gene. This fragment was cloned into the plasmid pCRII to produce pRII. The plasmid pRII was used to probe a rat brain DNA library in lambda ZAPII to obtain a clone of the rat kappa opioid receptor gene, designatd pKOPR2. This clone was introduced into E.coli JM109 for production of the receptor protein. The receptor protein is useful. If a screening of analgesic and hypnotic compounds including

Selective activation of target cell expressing modified G protein coupled receptor - allows control of cellular proliferation, respecially for amplification of transfected cells in gene therapy.

This protein comprises human kappa opioid receptor (KOR), a protein-coupled receptor implicated in neurotransmission. A novel method for selectively activating a target cell (TC) comprises: (1) introducing into the cell a nucleic acid sequence (1) that expresses a G protein-coupled receptor (A) modified to be activated superiorly by a synthetic ligand (RASIL); and (ii) exposing the transfected cell to small synthetic molecules (B) that bind to and activate (A), inducing the G protein coupled cellular capposing the transfected cell to small synthetic molecules (B) that bind to and activate (A), inducing the G protein coupled cellular capponse associated with receptor activation. (A) has: (a) decreased binding affinity for a selected natural ligand of the native receptor; (b) binding affinity for (B); and (c) is activated by binding (B) sufficiently to produce the required cellular response. Also new are: (1) transgenic cells including neterologus (I) in the genome: (2) cellular implants comprising a con-human animals expressing (A). Activation of (A) transgenic cellular product, particularly a heterologous therapeutic protein encoded by a second inserted nucleic acid sequence. Particularly transfected during gene therapy procedures. Other responses that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             transfected during gene therapy procedures. Other responses that can be regulated are cell migration and contraction, or pigment production. In transgenic animals, expression or stimulation of (A) is designed to develop cardiac arrhythmia, symptoms of bone disease, seizures, vascular contractions, dementia, neurodegeneration etc. for use as models of these diseases (claimed). The transgenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CIWILASSVGISAIVLGCTKVREDVDVIECSLQFPDDEYSWWDLFMKICVFVFAFVIPVL 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 7; Page 13-15; 30pp; French.
The sequence coding for the human kappa opioid receptor was obtained from two overlapping CDNA fragments isolated from a human placental CDNA library. The fragments were amplified from the library using PCR primers based on the sequence of human penentic clones which hybridised with a murine delta receptor oppose. Nucleotide probes derived from the kappa opioid receptor coding sequence are useful for diagnosis of neurological, eachor receptors. The receptor can be used for identifying e.g. agonists of its activity for potential use as analgesics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 mdspiqifrgepgptcapsaclppnssawfpgwaepdsngsagsedaglepahispaipv

Selective activation of target cell expressing modified 6 protein coupled receptor - allows control of cellular proliferation.

Symple 1, Page 77.79; ILTPP; English.

This polypeptide comprises the human G protein-coupled kappa opioid receptor (KOR) (see also W30.297) flanked by N.- and C-terminal sequences that facilitate the detection and C-terminal sequence (I) introducing into the cell a nucleic acid sequence (I) that expresses a RASEL (A) and (1) exposing the transferted cell to small synthetic molecules (B) that bind to and activate (A), inducing the G protein coupled cellular response transferted cell to small synthetic molecules (B) that bind to and activate (A), inducing the G protein coupled cellular response. Also new are: transgenic cells including heterologous (I) in the genome; cellular implants comprising a TC transfered by binding (B) sificiently to produce the required cellular response. Also new are: transgenic cells including heterologous (I) in the genome; cellular implants comprising a TC transfercted with (I); isolated (I); and transgenic animals expressing (A). Activation of (A) results in vitro or in vivo, in cellular proliferation, or secretion of a cellular product, particularly than sfected during gene therapy content are successfully transferted during gene therapy content and contraction, or pigment production. In transgenic animals, expression or stimulation of (A) is designed to expense callurant production of the callular profiles and contraction of the callular profiles and contraction of the callular profiles and contraction of sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         217
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  iitavysvvfvvglvgnslvmfviirytkmktatniyifnlaladalvtttmpfqstvyl 157
